Subject: RE: Formaldehyde assessment: Supplemental Information attached

Good afternoon,

Hope you all had a nice long holiday weekend and have caught up on emails from last week.

From Paul's email below, it appears that Alan and Marina have volunteered to review the modeling portions of document, too. Since Marina is on vacation this week, we really need one more person to help review the modeling sections. If you are interested, please let me know by Tuesday morning and we will coordinate more offline. We have to have comments collated and submitted by **July 26th**.

As a reminder this review will be high level and will not include "track changes" or wordsmithing. From Vince he would like our review to focus on:

1. Are the sections you reviewed clear, convincing, and objective?
2. Are the conclusions supported by the evidence presented?
3. Are the science issues addressed effectively, with alternative perspectives discussed where appropriate?
4. Are the issues raised by the NRC review of April 2011 addressed effectively?

We need not review the original literature. Begin with the evidence tables and see whether the synthesis follows logically and clearly. If not, that is a comment to take up within the Workgroup.

Thanks again for your participation on this workgroup!

Eva

Thanks for grabbing the bull, Jim B. From other emails it looks like Alan Sasso has been 'volunteered' to review also and Marina Evans expressed interest though she's on vacation this week.

Eva: could you coordinate the modeling review?

Subject: RE:

Please find attached the file containing the Supplemental Information to the formaldehyde Toxicological Review. Similar to the TR, this document has numerous comment bubbles, including materials in process and yet to be inserted.

Ex. 5 Deliberative Process (DP)

For both the TR and appendices, it would be useful to suggest the reviewers use the "Document Map" feature to "drive" around these large documents more quickly and effectively (this feature is located under the "View" tab in Word). In addition, in both the TR and Supplemental materials, the Table of Contents, Figures List, and Tables List should all be updated and active with (cntrl+click) links to the relevant text.

Regards,
Barbara and Andrew

PS: It remains unclear how the recent Endnote + Litciter updates pushed to all personnel will affect performance (as portions of both documents have been "HEROized")

Subject:

The draft toxicological review for formaldehyde is attached. A file containing supplemental information will be sent later today (we have encountered problems inserting portions, complicated by the problems with Outlook that occurred today). We (the formaldehyde team) are looking forward to participating in the review process and anticipate a stronger product as a result.

Ex. 5 Deliberative Process (DP)

Instead of extensive track-changes in the files, providing editorial comments in comment bubbles will be more helpful for revisions because the document is not static at this point.

Regards, Barbara and Andrew
